Other conventional soybean varieties
released by the North Dakota Agricultural Experiment Station:

**ND Henson** – (2015) 0.0 maturity. Good lodging resistance. IDC tolerance and phytophthora root rot resistance.

**ND1406HP** – (2014) 0.6 maturity. High protein and yellow hila. Good quality and yield.

**Ashtabula** – (2009) 0.4 maturity. High yield and yellow hila. Good tolerance to IDC. Resistance to phytophthora root rot.

**Sheyenne** – (2007) 0.8 maturity. High yield, yellow hila and resistance to race 3 of phytophthora root rot.

**ProSoy** – (2005) 0.7 maturity. A conventional variety with characteristics that make it suitable for the tofu specialty market. Similar maturity to Sargent with nearly equal yield and better IDC tolerance.

---

**Plant Quality Certified Seed**

Certified seed is field inspected and lab analyzed to help ensure variety identity, germination, and purity. Contact your local seed producer or dealer for quality certified seed.

Seed producers or dealers can be found in the North Dakota Field Inspected Seeds Directory. The directory is available from the North Dakota State Seed Department (NDSSD), your NDSU Extension Service agent, or under the field seeds program of the NDSSD website.

---

Varieties protected under PVPA with Title V option can only be sold as a certified class of seed. It is the responsibility of the buyer and/or seller to confirm the PVP status of a specific crop variety prior to buying or selling the variety. PVP status information can be obtained from the NDSSD.
**ND Bison** is a conventional soybean variety released by the North Dakota Agricultural Experiment Station in 2016. ND Bison is not resistant to glyphosate. It is intended to be a replacement for Sheyenne.

ND Bison's relative maturity is 0.7. Compared with Sheyenne, ND Bison matures one day earlier and is similar in yield.

ND Bison has improved defensive traits including moderate resistance to soybean cyst nematode (SCN) and resistance to races 3 and 4 of phytophthora root rot. This new variety also has tolerance to iron-deficiency chlorosis (IDC) and has resistance to lodging.

ND Bison has performed very well in the multi-state Uniform Region Test which includes testing sites in southern Minnesota and Canada.

ND Bison has purple flower color, tawny pubescence, brown pods, dull seed coat luster and yellow hila.

To help ensure genetic purity, ND Bison soybean will be protected under PVPA Title V and must be sold as a class of certified seed.

Development of this variety was made possible through funds provided by the North Dakota Soybean Council.

### General Characteristics
- 0.7 maturity
- Moderate SCN resistance
- Phytophthora root rot resistance (races 3, 4)
- Conventional
